

POPULATION EXPLORER

At A Glance

The Aledade App's unique Population Explorer feature empowers your practice with access to timely, actionable data about your patient population from across the spectrum of care. This data enhances your decision-making abilities and can help you to redesign workflows and patient care offerings to keep your practice at the top of its game.

What is the Population Explorer?

Data integration and interoperability are huge challenges in healthcare. There are hundreds of different electronic health records (EHRs) and other systems in use across the industry, and not all of them can share data in a standardized and easy-to-use format.

The App combines data from EHRs, hospital event notifications, health information exchanges (HIEs), labs and pharmacies, and insights from practice-generated and payer claims into a single, user-friendly solution, enabling your practice to view timely data about patients and their activities in the community.

With this data at your fingertips, you can identify opportunities to develop more efficient workflows for your staff, long-term strategies to grow your practice, and improve patient engagement and outreach efforts.
